## KoStart

===== koStart Cracked Version is a small utility that can delay running the programs in the startup folder after a predefined period of time (maximum 60 seconds), in order to increase the boot time. The setup procedure requires only to select the programs that will be run, the period of time they should remain "unrunnable", and the maximum time they should remain so (60 seconds). Users can select the programs to be delayed for running, by using a filter based on the type of program, name or file extension (can be changed). All the filters can be modified using a simple interface. The programs will be delayed for running even if they are not disabled in the Startup Manager of the Windows Control Panel. The utilities can be integrated with the Windows Vista "Startup Repair" feature, in order to verify the delay of the programs during the boot process. ===== Input the programs to delay for running: ===== - Click "Browse" to select the folder containing the programs to delay for running - Click "OK" to open the "Filter" window, in which the user can select the types of programs that will be delayed for running - Check the programs to be delayed for running to be delayed and then click "OK" - Check the programs to be delayed for running to remain unrunnable for the maximum time and then click "OK" - Click "OK" to confirm ===== Examples: ===== - Delay all the programs by 15 minutes: - In the "Browse" window, select the folder in which the programs are located - In the "Filter" window, select the following types of programs: - All types: Delay all the programs for 15 minutes - Programs by name: Delay all the programs by 15 minutes named "Google Chrome" - Programs by extension: Delay all the programs by 15 minutes with the extension ".exe" ===== - Delay all the programs by 15 minutes until the system has shut down: - In the "Browse" window, select the folder in which the programs are located - In the "Filter" window, select the following types of programs: - All types: Delay all the programs for 15 minutes until the system has shut down - Programs by name: Delay all the programs by 15 minutes named "Google Chrome" - Programs by extension: Delay all the programs by 15 minutes

## What's New in the KoStart?

koStart delays the startup of your applications by a predefined time period (maximum 60 seconds). It can be useful if you need to launch some programs at startup and you do not want them to be launched right away. Major Changes: \* Improved internationalization support \* New parameters: the delay and the log file \* Added package for CentOS and RedHat distributions \* Added parameter for uninstalling v3.1.1 - Apr 10 2010 \* Fixed a bug: some parameters were wrong in the English description \* Added Persian translation \* Changed the licence to a more permissive one v3.0.1 - Nov 06 2009 \* Added parameter for the command to execute after the delay \* Increased the maximum number of seconds of delay from 60 to 180 seconds v3.0 - Nov 06 2009 \* Added a default value for the delay parameter: 15 seconds \* Implemented a proper graphical interface \* Support for multiple programs and directories \* Short description and improved English translation \* Added a "Uninstall" command to remove the delay after you finished using it v2.2 - Sep 06 2009 \* Fixed a bug: the delay was not correctly started v2.1 - Feb 06 2009

**System Requirements:**

PC version is recommended. The minimum system requirements are: OS: Windows 7 or Windows 8 Processor: Intel Core i3-2370 or AMD Phenom II X2 555 Memory: 4 GB RAM Graphics: Radeon HD 5450 or GeForce GT 540M Hard Drive: 20 GB available space Recommended System Requirements: OS: Windows 8.1 or Windows 10 Processor: Intel Core i5 or AMD Phenom II X2 667 Memory: 8
